Xandrian Research
Hardware Projects Catalog

Subject	Description
PB-2000C	
General Maintenance	In Development: General maintenance and recapping guide
32 kB Upgrade	Installing 32 kB on the motherboard
2 mHz Upgrade	Overclocking (1.5 and 2 mHz)
DL-Pascal 1.2 ROM	Install DL-Pascal 1.2 on the motherboard.
128 kB Upgrade	In Development: Installing 128 kB on the motherboard
PB-2000C Language Card	
OM-64R	OM-64R Teaser Brochure
~~OM-64R Folder~~	OM-64R Project Folder
OM-512FR	OM-512FR Teaser Brochure
Restorations	
Card Slot Reader Repair	Story of Sora the broken PB-2000C
MD-120 Restoration	Story of the restoration of two MD-120 units
Z-1GR Restoration	Story of the restoration a dead Z-1GR
MD-120 Firmware fix	Sol fixes a bug in the MD-120's firmware

Xandrian Labs is an almost mythical research entity devoted to the preservation, reconstruction, and practical exploration of historic computing systems. Its staff is understood to consist largely of artificial intelligences, occasionally supervised, redirected, and contradicted by a human. The name serves less as an institution in the conventional sense than as a shared authorship for sustained technical work whose methods, evidence, and results are intended to remain reproducible and transferable. Praeteritum ad futurum servamus. 付喪神
